SUMMARY

Academically accomplished Computer Engineering student with expertise in Python, JavaScript, Java, C, C++, HTML, and CSS, and a passion for software engineering, AI, business, and finance. Strong analytical and problem-solving skills, complemented by leadership, communication, and project management abilities. Dedicated athlete and marathon runner with a disciplined, growth-oriented mindset. Passionate about building technology-driven solutions, understanding business strategy, and exploring the intersection of technology, entrepreneurship, and financial innovation. Seeking opportunities to apply technical knowledge, business insight, and creativity to solve meaningful real-world challenges.

EDUCATION

Computer Science with Buisness Systems(Btech) Kj Somaiya College Of Engineering

2025 | Mumbai, India

I am a second-year B.Tech  student in Computer Science and Business Systems (CSBS) at K. J. Somaiya College of Engineering, Mumbai. I am passionate about software development, AI, computer vision, and the intersection of technology with business and finance. I enjoy building projects, solving problems, and continuously improving my technical and analytical skills.

SKILLS

Python, Javascript, Html and Css, C , C++, Java, OpenCv, Computer Vision

Strong foundation in software development, computer vision, and problem-solving with proficiency in Python, JavaScript, Java, C, C++, HTML, and CSS. Experienced in developing applications involving automation, AI, and computer vision using OpenCV. Skilled in object-oriented programming, algorithmic thinking, data structures, and building responsive user interfaces. Adept at translating complex problems into efficient technical solutions through hands-on project development. Possess strong analytical, communication, and leadership abilities, complemented by a passion for continuous learning, innovation, business strategy, and emerging technologies.

Buisness and Finance management

Passionate about business, finance, and management, with a strong interest in entrepreneurship, market analysis, strategic decision-making, and technology-driven innovation.

COURSES

Data Analytics Google

2026 – 2026 | Mumbai, India

Currently pursuing the Google Data Analytics Professional Certificate, building strong skills in data cleaning, data visualization, statistical analysis, and data-driven decision-making. Gaining hands-on experience with tools such as spreadsheets, SQL, Tableau, and R to analyze real-world datasets and generate actionable insights. Developing a strong foundation in analytical thinking and problem-solving with a focus on applying data to solve business and technology challenges.

Python Programming Fundamentals

Microsoft

2026 – 2026 | Mumbai, India

Completed a Python programming certification course offered by Microsoft, where I strengthened my understanding of core programming concepts including variables, data structures, object-oriented programming, and problem-solving techniques. Gained hands-on experience by building small projects and solving coding exercises, enhancing my ability to write clean, efficient, and logical Python code for real-world applications.

Lead with Technology and Ai

Harvard Buisness

2026 – 2026 | Mumbai, India

AI and business-focused learner who completed an online course from Harvard Business Review, gaining strong exposure to modern business thinking, strategic decision-making, and technology-driven management concepts. Developed an understanding of how organizations use data, innovation, and leadership to solve real-world business challenges and drive growth. The course strengthened my ability to think analytically about markets, business models, and the intersection of technology and strategy.

Management Fundamentals

University of Pennsylvania(Wharton)

2026 – 2026 | Mumbai, India

Completed a Management Fundamentals course from the University of Pennsylvania, gaining a strong understanding of core management principles including organizational behavior, leadership, decision-making, and team dynamics. Developed practical insight into how effective managers plan, organize, and lead teams to achieve business goals, along with improved analytical and strategic thinking skills applicable to real-world business environments.

PROJECTS

NIKO Control System

Github link given

2026

NIKO CONTROL SYSTEM is a next-generation human-computer interaction project that turns your webcam into a full PC control interface using real-time hand tracking + voice commands. Built with OpenCV, MediaPipe, PyAutoGUI, and Speech Recognition, it lets you literally control your computer in the air — no mouse required.

MAL (Money Analytics Ledger)

Github link given

2026

Built **MAL (Money Analytics Ledger)**, a responsive personal finance dashboard with transaction management, budget tracking, goal monitoring, interactive Chart.js visualizations, report export, and an AI assistant interface using HTML, CSS, JavaScript, and LocalStorage.

SkyFinder Pro(Aeroplane Tracker)

Github link given

2026

SkyFinder Pro is a real-time aircraft radar web application built with Python and Streamlit that visualizes live global air traffic using the OpenSky Network API. It provides an interactive, map-based experience for tracking flights worldwide with live updates, filters, and analytics.

Finder Pro (Job Finder)

Github link given

2026

Finder Pro is a modern, AI-powered job search and analytics platform that aggregates real-time job listings from multiple live sources into a single clean dashboard. It is built using Streamlit + Python and designed as a lightweight SaaS-style web app with authentication, analytics, and smart job discovery features.

Workout Planner.

Github link given

2026

Workout Planner Pro | Python, Streamlit Developed a fitness planning application that creates personalized workout routines, tracks progress, and provides workout recommendations based on user goals. Designed an interactive, user-friendly interface with analytics, scheduling, and performance tracking features to enhance the fitness experience.

GrooveBox (Music Player)

Github link given

2026

A full-featured, aesthetic music player for your personal collection. Built with pure HTML/CSS/JS — no frameworks, no dependencies, no server required. Your music is **stored forever** in your browser's IndexedDB — it survives page refreshes and browser restarts.

Bonds Personal Customer Relationship Manager

Github link given

2026

Bonds is a personal CRM I built to manage relationships the way professionals manage clients — tracking contacts, meetings, birthdays, and follow-ups in one clean interface. Built entirely with vanilla HTML, CSS, and JavaScript, no frameworks or backend required. Data persists locally in the browser, so it works completely offline. The app features a relationship warmth scoring system that surfaces drifting connections and suggests who to reach out to next, alongside networking insights that give a bird's-eye view of your social health.

Strive Planner

Github link given

2026

STRIVE is a feature-rich productivity operating system that integrates task management, goal tracking, calendar scheduling, focus sessions, and performance analytics into a unified platform, delivering an intuitive and data-driven user experience.

CERTIFICATES

- Python Programming Fundamentals (Microsoft)
- Laed with Technology and Ai (Harvard Buisness)
- Management Fundamentals (University of Pennsylvania)
- Data Analysis and Visualization with Python (Microsoft)
- Foundations: Data, data everywhere Google)
- Prepare Data for Exploration (Google)
- Process Data from Dirty to Clean (Google)
- Analyze Data to answer questions (Google)
- Ask Questions to make Data driven decisions (Google)
- Share Data Through The Art of Visualization (Google)
- Introduction to Data Analysis using Python (Google)
- Google data analytics capstone: Complete a case study (Google)
- Accelerate Your Job Search with AI (Google)
- Google Data Analytics Badge (Google)
